

Numerical Methods in Approximation Theory, Vol. 9

By Braess, D. / Schumaker, L. L.

Book Condition: New. Publisher/Verlag: Springer, Basel | This book is the official proceedings of a conference on Numerical Methods in Approximation Theory which was held at the Mathematisches Forschungsinstitut in Oberwolfach during the week of November 24~30, 1991. It contains refereed and edited papers by 20 of the 49 participants. The book is dedicated to the memory of Prof. Lothar Collatz who maintained a long and active interest in numerical approximation. It is the ninth in a series of volumes published by Birkhäuser resulting from conferences on the subject held at Oberwolfach, and co-organized by Prof. Collatz. We now briefly describe the contents of the book. The paper of BASZENSKI, DELVOS and JESTER deals with blending using sine double series expansions of functions defined on the unit square. In addition to giving explicit error estimates for partial sums and for interpolating sine polynomials, they also show that Boolean sums yield almost the same asymptotic error estimates as the conventional tensor-product approach, but with a reduced number of terms. The paper of BEATSON and LIGHT discusses approximation by quasi interpolants which are sums of scaled translates of a one-parameter family of functions. They do not require reproduction...

Reviews

This is the very best pdf I actually have studied right up until now. I could possibly comprehend almost everything using this created e book. Your daily life span will be enhanced as soon as you total looking over this publication.

-- Prof. Johnson Rutherford

A top quality publication along with the typeface applied was exciting to read through. It can be really interesting through reading through time. Your life period will be enhanced once you fully reading this article book.

-- Prof. Demond McClure
