## Reviews

*Very helpful to all category of individuals. It is definitely simplified but surprises inside the 50 percent of your pdf. I am very happy to inform you that this is actually the very best pdf i have read in my very own lifestyle and may be he finest pdf for actually.*

*(Christelle Treutel)*

## AN ASSESSMENT OF SEISMIC NOISE LEVELS FOR THE ADVANCED NATIONAL SEISMIC SYSTEM BACKBONE NETWORK AND SELECTED REGIONAL BROADBAND STATIONS: USGS OPEN-FILE REPORT 2005-1077

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. In this paper we assess the relative noise levels of 113 broadband seismic stations within the United States Geological Surveys (USGS) Advanced National Seismic System (ANSS) (netcode US), the Global Seismic Network (GSN) (netcodes IL, IU) and several United States regional networks (netcodes CI, LB, UO, UW, NM). This assessment makes use of seismic power spectral data collected by a continuous noise monitoring system developed by the USGS-ANSS and the Incorporated Research Institutions in Seismology (IRIS) Data Management Center (DMC). We rank the stations relative to the Peterson Low noise model (LNM) (Peterson, 1993) for 11 different period bands. Results are listed in Appendix A. Results show that most regional stations rank low in all period bands. In general, stations in the US network have lower noise levels at short periods (0. 0625-8. 0 seconds), high frequencies (8. 0-0. 125Hz) while stations in the GSN network are quieter at long periods (16. 0-128. 0 seconds), low frequencies (0. 03125-0. 01563Hz). This result reflects the overall mission and objectives of each network. This item ships from La Vergne, TN. Paperback.
