

General Biology (Paperback)

By William Thompson Sedgwick

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1886 Excerpt: .individual before the ripening of the other set, is a common feature among plants, and is known as dichogamy. There is reason to believe that important advantages are gained by thus securing cross-fertilization and preventing self-fertilization or breeding in and in. In the development of the archegonium the original cell enlarges, becomes somewhat dome-shaped, and divides by transverse partitions into three cells: a proximal, imbedded in the tissue of the prothallium, a middle, and a distal dome-shaped cell (Fig. 64). The fate of the proximal B cell is unimportant. The Fig. 65. (After Strasburger.)--Developing archegonia of *Pteris serrulata*. A, young stage; B, older; m, neck; c, canal; o, oosphere. distal cell gives rise by division to a chimney-like structure, the neck (Figs. 63, 65), which encloses a row of cells (canal-cells) derived from the original middle cell (Figs. 63, 65). These afterwards become transformed into a...
